BRANDON JACKSON	3772	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS,

- WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.
- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed
- after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).

 Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any

DETAILED ACTION

This Office Action is in response to amendments/arguments filed 2/8/2010. Currently, claims 1-60 are pending and claims 1 and 31-39 remain withdrawn in the instant application.

Oath/Declaration

The Supplemental Declaration of Lisa M. Vallino filed on 2/8/2010 under 37 CFR 1.131 has been considered but is ineffective to overcome the Shesol U.S. Patent 6,257,240 reference. The affidavit is insufficient because Exhibit C fails to show a hollow member with a flange connected to a fabric connector that does not traverse the sidewall. The view of Exhibit C makes it impossible to discern whether the fabric connector traverses the sidewall.

Response to Arguments

Applicant's arguments filed 2/8/2010 have been fully considered but they are not persuasive. Applicant argues Grabenkort does not fairly teach or suggest a hollow member with at least one fabric connector. However, Grabenkort teaches hollow member (12) with a flange (16) that is attached to the lower edge of the hollow member (12). Figure 6 shows fabric connectors (34) that connect the hollow member (12) to the user at the flange (16) without traversing the sidewall of the hollow member (12).

Application/Control Number: 10/501,604

Art Unit: 3772

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Omum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3,73(b).

Claims 1, 34, and 38-39 rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 6,526,981.

Although the conflicting claims are not identical, they are not patentably distinct from each other because all the limitations of Application claim 1 can be found in claim 1 of Patent '981. With respect to claim 34, all the limitation can be found in claims 1-3 of the '981. With respect to claims 38-39, all the limitations can be found in claims 1-5 of '981.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3772

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior at are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- Determining the scope and contents of the prior art.
- Ascertaining the differences between the prior art and the claims at issue.
 Resolving the level of ordinary skill in the pertinent art
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Shesol (US Patent 6,257,240) in view of Grabenkort et al. (US Patent 4,237,010). Shesol discloses a hollow member (30) having a base (32); an edge positioned upon the patient (fig. 1); hollow member width, height, and length are sufficient to straddle and cover the site (18). The base (32) is joined with the sidewall to form a cover (12). At least one fabric connector (46) is affixed to the hollow member (30). A hook and loop (68), an adhesive (col. 5, lines 36-39), or an ultrasonic bonding (col. 5, lines 36-39) can be used as the means to affix the fabric connector (46) to the hollow member (30). Hook and loop fasteners (52) are the means used to close the fabric connector (46) on the patient (16). Shesol fails to disclose the hollow member has a flange attached to the lower edge of the hollow member. However, Grabenkort teaches a site guard (10) comprising a hollow member (12) having a flange (16) attached to the lower edge of the hollow member (12). Therefore, it would be obvious to one of ordinary skill in the art at the time of the invention to modify the Shesol device to have a flange, as taught by

Art Unit: 3772

Grabenkort, because the flange provides the device with greater surface area contacting the patient, which would in turn better stabilize the device and prevent movement of the guard while in use. Moreover, it would be obvious to one of ordinary skill in the art that the fabric connector (46) could be affixed to the flanges, as taught by Shesol/Grabenkort, because the fabric connector (46) is merely connected to the edges of the hollow member (30), not traversing the sidewall, as shown in Figure 3. The edge of the Shesol/Grabenkort hollow member (30) is the flange (16).

Claims 31-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shesol (US Patent 6,257,240) and Grabenkort et al. (US Patent 4,237,010) in view of Hely (US Patent 6,142,966). Shesol/Grabenkort substantially discloses the claimed invention, see claim 1 rejection above. Shesol/Grabenkort fails to disclose at least one opening to accommodate a body part or the first and second opening to accommodate the right and left thumb. However, Hely teaches a wrap (10) comprising a thumbhole (25). Therefore it would be obvious to one of ordinary skill in the art at the time of the invention to modify the Shesol/Grabenkort wrap with a thumbhole, as taught by Hely, because it would prevent the device from moving up and down on the hand. Moreover, it would have been obvious to one of ordinary skill in the art at the time of the invention to add another thumbhole adjacent to the current thumbhole to accommodate a right or left thumb, since it has been held that mere duplication of essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193

Art Unit: 3772

USPQ 8.

Claims 34-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shesol (US Patent 6,257,240) and Grabenkort et al. (US Patent 4,237,010) in view of Bierman (US Patent 5,722,959). Shesol/Grabenkort substantially discloses the claimed invention; see rejection to claim 1 above. Shesol/Grabenkort also discloses a hook and loop means (68) for affixing the wrap (46) to the sidewall of the hollow member (30). Shesol/Grabenkort fails to disclose cushion attached to the fabric connector opposite the lower edge of the hollow member. However, Bierman teaches a catheter securement device (10) with a cushion (18) disposes between the device (10) and the user's skin. Therefore, it would have been obvious to one of ordinary skill in the art to modify the Shesol/Grabenkort device with a cushion, as taught by Bierman, in order to provide the user more comfort while the device is secured to the skin.

Claims 36-37 rejected under 35 U.S.C. 103(a) as being unpatentable over Shesol (US Patent 6,257,240) and Grabenkort et al. (US Patent 4,237,010) in view of Nix (US Patent 5,807,300). Shesol/Grabenkort substantially discloses the claimed invention; see rejection to claims 1 and 34 above. Shesol/Grabenkort fails to disclose tubular mesh comprising openings to accommodate various body parts. Nix teaches a wrap (16) made of tubular mesh (col. 1, lines 58-59). Therefore it would be obvious to one of ordinary skill in the art at the time of the invention to substitute the undisclosed material of Shesol/Grabenkort for the tubular mesh, as taught by Nix, in order to allow

Art Unit: 3772

air flow and elasticity so the wrap will fit all size hands.

Claims 38-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shesol (US Patent 6,257,240) and Grabenkort et al. (US Patent 4,237,010) in view of Shultz (US Patent 6,132,399). Shesol/Grabenkort substantially discloses the claimed invention; see rejection to claim 1 above. Shesol/Grabenkort fails to disclose an agent in the fabric connector and where the agent is selected to be one of antimicrobial, antifungal, antiviral, aloe, vitamin E, and combinations of any of the foregoing. However, Shultz teaches an intravenous securement dressing (10) comprising antimicrobial compound, antifungal compound or vitamins (col. 5, lines 25-28). Therefore, it would be obvious to one of ordinary skill in the art at the time of the invention to modify the Shesol/Grabenkort fabric connector with an antimicrobial or antifungal compound in order to aid in the healing in the intravenous site and to prevent infection.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 3772

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BRANDON JACKSON whose telephone number is (571)272-3414. The examiner can normally be reached on Monday - Friday 8-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Patricia Bianco can be reached on (571)272-4940. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
